

# M310D2 - Mar. 22, 2016

Item # M310D2 was discontinued on Mar. 22, 2016. For informational purposes, this is a copy of the website content at that time and is valid only for the stated product.

### UV, Visible, and IR Models Available

- ► LED Mounted on Metal-Core Printed Circuit Board
- ► Ideal for OEM Applications

M340D3 340 nm LED, Power Output ≥ 53 mW

M1300D2 1300 nm LED, Power Output ≥ 25 mW

M565D2 565 nm LED, Power

### Hide Overview

### **Features**

- Nominal Wavelengths Ranging from 265 nm to 1550 nm
- Warm White (3000 K), Cold White (6500 K), and Broadband (470 850 nm) LEDs Also Available
- Outputs Ranging from 10 mW to 2350 mW
- LED Mounted on Metal-Core Printed Circuit Board for Excellent Heat Management
- Long Lifetimes (See Specs Tab for Details)

Thorlabs' LEDs on Metal-Core Printed Circuit Boards (MCPCBs) are designed to provide high-power output in a compact package. Each LED consists of a single LED with multiple emitters that has been soldered to an MCPCB. These LEDs are ideal for OEM or custom applications; they should not be used for household illumination.

Thorlabs uses high-thermal-conductivity MCPCB materials from Bergquist and SinkPAD (see footnote d in the table to the right for the material used in each LED). The MCPCB is designed to provide good thermal management. However, the LED must still be mounted onto an appropriate heat sink using thermal paste to ensure proper operation and to maximize operating lifetime. Mounting holes are provided on the MCPCB surface for attaching the LED to a heat sink; the 02 mm through holes are compatible with #1 (M2) screws (not included).

The spectrum of each LED and associated data file can be viewed by clicking on the links in the table to the right. Multiple windows can be opened simultaneously in order to compare LEDs.

Thorlabs also offers mounted LEDs with an integrated heat sink, as well as collimated mounted LEDs, which are compatible with microscopes from major manufacturers. For fiber applications, we also offer fiber-coupled LEDs. For questions on choosing an appropriate LED and to discuss mounting requirements, please contact Tech Support.

### Optimized Thermal Management

These LEDs possess good thermal stability properties, and hence, degradation of optical output power due to increased LED temperature is not an issue when the LED is properly mounted to a heat sink using thermal paste, thermal epoxy, or thermally conductive double-sided tape. For more

details, please see the Stability tab.

#### White Light and Broadband LEDs

Our cold white and warm white LEDs feature broad spectra that span several hundred nanometers. The difference in appearance between these two LEDs can be described using the correlated color temperature, which indicates that the LEDs color appearance is similar to a black body radiator at that temperature. In general, warm white LEDs offer a spectrum similar to a tungsten source, while cold white LEDs have a stronger blue component to the spectrum. Cold white LEDs are more suited for fluorescence microscopy applications or cameras with white balancing, because of a higher intensity at most wavelengths compared to warm white LEDs.

The MBB1D1 LED has been designed to have relatively flat spectral emission over a wide wavelength range. Its FWHM bandwidth ranges from 500 nm to 780 nm, while the 10 dB bandwidth ranges between 470 nm and 850 nm. To view a plot of the spectrum of this broadband source, please see the table to the right.

#### Soldering

These LEDs have been soldered to a metal core with low thermal resistance. While this feature allows for good thermal management, it can also prevent the metal pads from reaching the

M1450D2	IR	1450 nm	31 mW
M1550D2	IR	1550 nm	31 mW
MBB1D1 <sup>f</sup>	Broadband	470 - 850 nm <sup>g</sup>	70 mW
MWWHD1 <sup>e</sup>	Warm White	3000 K <sup>h</sup>	500 mW
MWWHD3 <sup>e</sup>	Warm White	3000 K	2000 mW
MCWHD2 <sup>d,e</sup>	Cold White	6500 K <sup>h</sup>	800 mW
MCWHD3e	Cold White	6500 K	2350 mW

- Due to variations in the manufacturing process and operating parameters such as temperature
  and current, the actual spectral output of any given LED will vary. These values were measured
  with the back side of the PCB at 25 °C. Output plots and nominal wavelength specs are only
  intended to be used as a guideline.
- For LEDs in the visible spectrum, the nominal wavelength indicates the wavelength at which the LED appears brightest to the human eye. The nominal wavelength for visible LEDs may not correspond to the peak wavelength as measured by a spectrograph.
- Our 265 nm to 420 nm LEDs radiate intense UV light during operation. Precautions must be
  taken to prevent looking directly at the UV light and UV light protective glasses must be worn to
  avoid eye damage. Exposure of the skin and other body parts to the UV light should be avoided.
- These LEDs use a high-thermal-conductivity MCPCB material from SinkPAD, while the rest of the MCPCB LEDs use a high-thermal-conductivity MCPCB material from Bergquist.
- These LEDs are phosphor-converted and may not turn off completely when modulated above 10 kHz at duty cycles below 50%.
- The MBB1D1 LED may not turn off completely when modulated at frequencies above 1 kHz with
  a duty cycle of 50%, as the broadband emission is produced by optically stimulating emission
  from phosphor. For modulation at frequencies above 1 kHz, the duty cycle may be reduced. For
  example, 10 kHz modulation is attainable with a duty cycle of 5%.
- · 10 dB Bandwidth
- · Correlated Color Temperature

appropriate temperature for soldering when the package is connected to a heat sink. To properly solder wires to the pads, first make sure that the metal core is not in contact with a heat sink or a metal surface. We recommend using a small vise or similar device to hold the MCPCB during the soldering process and wires with a minimum gauge of 24 AWG (0.25 mm<sup>2</sup>).

To solder wires to the MCPCB, first hold the copper bit of the soldering iron on one of the pads for approximately 30 seconds using a soldering temperature of about 350 °C. The soldering iron will heat the entire metal-core PCB, so do not touch the LED package until it has cooled down after the soldering process. Test the temperature by touching tin solder to the pad: the solder will melt and flow evenly over the entire pad at the correct temperature. Coat the other pads with tin solder. Now, solder the wires to the pads. Use tweezers or pliers to remove the MCPCB from the vise and place it on a heat sink or metal surface. The metal-core PCB will cool down in several seconds and is now ready for your application.

For convenient connection of the LEDs to the drivers listed on the LED Drivers tab, please order the optional CAB-LEDD1 LED connection cable below.

### **Driver Options and Pin Assignments**

Thorlabs offers four drivers: LEDD1B, DC2200, DC4100, and DC4104 (the latter two require the DC4100-HUB). See the *LED Drivers* tab for compatibility information and a list of specifications. The LEDD1B is capable of providing LED modulation frequencies up to 5 kHz, while DC4100, and DC4104 can modulate the LED at a rate up to 100 kHz. The DC2200 can provide modulation at up to 250 kHz if driven by an external source. Please note that MCPCB LEDs are not compatible with the EEPROM feature of the DC2200, DC4100, and DC4104, which automatically adjusts for the current limits of our mounted LEDs. Therefore, care must be taken not to exceed the current limits of the LEDs offered on this page.

To connect the PCB to a controller, please note that the soldering pad labeled \*+\* is the Anode (+V), and the pad labeled \*-\* is the Cathode. The other two pads (\*IO\* and \*GND\*) do not need to be connected and are reserved for future use. The soldering pads on different items may be in different locations, but the labels are the same.

- Due to variations in the manufacturing process and operating parameters such as temperature and current, the actual spectral output of any given LED will vary. These values were measured with the back side of the PCB at 25 °C. Output plots and center wavelength specs are only intended to be used as a guideline.
- For LEDs in the visible spectrum, the nominal wavelength indicates the wavelength at which the LED appears brightest to the human eye. The nominal wavelength for visible LEDs may not correspond to the peak wavelength as measured by a spectrograph.
- Irradiance is measured at a distance of 200 mm from the LED.
- Our 280 nm to 420 nm LEDs radiate intense UV light during operation. Precautions must be taken to prevent looking directly at the UV light and UV light protective glasses must be worn to avoid eye damage. Exposure of the skin and other body parts to the UV light should be avoided.
- These LEDs use a high-thermal-conductivity MCPCB material from SinkPAD, while the rest of the MCPCB LEDs use a high-thermal-conductivity MCPCB material from Bergquist.
- These LEDs are phosphor-converted and may not turn off completely when modulated above 10 kHz at duty cycles below 50%.
- The MBB1D1 LED may not turn off completely when modulated at frequencies above 1 kHz with a duty cycle of 50%, as the broadband emission is
  produced by optically stimulating emission from phosphor. For modulation at frequencies above 1 kHz, the duty cycle may be reduced. For example, 10
  kHz modulation is attainable with a duty cycle of 5%.
- 10 dB Bandwidth
- Correlated Color Temperature

### Hide Relative Power

### RELATIVE POWER

## Relative Power

The actual spectral output and total output power of any given LED will vary due to variations in the manufacturing process and operating parameters, such as temperature and current. Both a typical and minimum output power are specified to help you select an LED that suits your needs. Each metal-core PCB LED will provide at least the minimum specified output power at the maximum current. In order to provide a point of comparison for the relative powers of LEDs with different nominal wavelengths, the spectra in the plots below have been scaled to the minimum output power for each LED. This data is representative, not absolute. An excel file with normalized and scaled spectra for all of the unmounted LEDs can be downloaded here.

Hide Stability

## LED Lifetime and Long-Term Power Stability

One characteristic of LEDs is that they naturally exhibit power degradation with time. Often this power degradation is slow, but there are also instances where large, rapid drops in power, or even complete LED failure, occur. LED lifetimes are defined as the time it takes a specified percentage of a type of LED to fall below some power level. The parameters for the lifetime measurement can be written using the notation  $B_{XX}/L_{YY}$ , where XX is the percentage of that type of LED that will provide less than YY percent of the specified output power after the lifetime has elapsed. Thorlabs defines the lifetime of our LEDs as  $B_{50}/L_{50}$ , meaning that 50% of the LEDs with a given Item # will fall below 50% of the initial optical power at the end of the specified lifetime. For example, if a batch of 100 LEDs is rated for 150 mW of output power, 50 of these LEDs can be expected to produce an output power of ≤75 mW after the specified LED lifetime has elapsed.

### **Optimizing Thermal Management**

In order to achieve stable optical output power and maximize lifetime from your LED, the MCPCB must be properly mounted to a heat sink using thermally conductive paste in order to minimize the degradation of optical output power caused by increased LED junction temperature (see the graph to the right).

#### Hide LED Drivers

LED DRIVERS				
Compatible Drivers	LEDD1B <sup>a</sup>	DC2200 <sup>b</sup>	DC4100 <sup>b,c,d</sup>	DC4104 <sup>b,c,d</sup>

EEPROM Compatible: Reads Out LED Data for LED Settings	-	✓	✓	✓
LCD Display	-	<b>✓</b>	✓	✓

- The LEDD1B should not be used to drive the M340D3, as the current limit can only be set to a minimum of 200 mA (compared to the M340D3's max drive current of 80 mA). LEDs with maximum current ratings higher than 1.2 A can be driven using this driver, but will not reach full power.
- Please note that the EEPROM readout feature that automatically adjusts the driver's current limit for our mounted LEDs is not compatible with our LEDs on MCPCB.
- The DC4100 and DC4104 can power and control up to four LEDs simultaneously when used with the DC4100-HUB. The LEDs on this page all require
  the DC4100-HUB and the CAB-LEDD1 cable when used with the DC4100 or DC4104 drivers.
- These LED drivers have a maximum forward voltage rating of 5 V and can provide a maximum current of 1000 mA. As a result, they cannot be used
  to drive LEDs which have forward voltage ratings greater than 5 V. LEDs with maximum current ratings higher than 1.0 A can be driven using this
  driver, but will not reach full power.
- The MCPCB LEDs sold below are compatible with the LED2 Terminal via the CAB-LEDD1 (available separately below).
- Small Signal Bandwidth: Modulation not exceeding 20% of full scale current. The driver accepts other waveforms, but the maximum frequency will be reduced.
- Several of these LEDs produce light by stimulating emission from phosphor, which limits their modulation frequencies. The M565D2, M595D2, MWWHD1 and MCWHD2 LEDs may not turn off completely when modulated above 10 kHz at duty cycles below 50%. The MBB1D1 LED may not turn off completely when modulated at frequencies above 1 kHz, the duty cycle of 50%. When the MBB1D1 is modulated at frequencies above 1 kHz, the duty cycle may be reduced; for example, 10 kHz modulation is attainable with a duty cycle of 5%.

Note: The DC3100 drivers sold with our Modulated LEDs for FLIM Microscopy kits are not compatible with the LEDs sold on this page.

### Hide Ray Data

RAY DATA&NBS	SP;		
Ray data for Zemax is			Click to

available for some of the bare LEDs incorporated into these high-powered light sources. This data is provided in a zipped folder that can be downloaded by clicking on the red document icons ( ) next to the part numbers in the pricing tables below. Every zipped folder contains an information file and one or more ray files for use with Zemax:

Item #	Information File	Available Ray Files	File Size	Download
M365D1	M365_Info.pdf	100,000 Rays and 1 Million Rays	27.4 MB	È

- Information
   File: This
   document
   contains a
   summary of the
   types of data
   files included in
   the zipped
- A radiometric color spectrum, bare LED CAD file, and sample Zemax file are also available for these LEDs.
- The ray data files for the M455D2 can be used for the M470D2 as well by manually resetting the source wavelength in Zemax. Wavelength-specific data and files, such as the radiometric color spectrum and sample Zemax files, only apply to the M455L3.
- The ray data files for the M617D2 can be used for the M590D2 and M625D2 as well by manually resetting the source
  wavelength in Zemax. Wavelength-specific data and files, such as the radiometric color spectrum and sample Zemax files,
  only apply to the M617D2.

folder and some basic information about their use. It includes a table listing each document type and the corresponding filenames.

• Ray Files: These are binary files containing ray data for use with Zemax.

For the LEDs marked with an superscript "a" in the table to the right, the following additional pieces of information are also included in the zipped folder:

- Radiometric Color Spectrum: This .spc file is also intended for use with Zemax.
- CAD Files: A file indicating the geometry of the bare LED. For the dimensions of the high-power mounted LEDs that include the package, please see the support drawings provided by Thorlabs.
- Sample Zemax File: A sample file containing the recommended settings and placement of the ray files and bare LED CAD model when used with Zemax.

The table to the right summarizes the ray files available for each LED and any other supporting documentation provided.

- These Collimated LEDs are compatible with the standard and epi-illumination ports on the following microscopes: Olympus BX/IX (Item # Suffix: -C1), Leica DMI (Item # Suffix: -C2), Zeiss Axioskop (Item # Suffix: -C4), and Nikon Eclipse (Bayonet Mount, Item # Suffix: -C5).
- Typical power when used with MM Fiber with Ø400  $\mu m$  core, 0.39 NA.
- Our LED4D 4-Wavelength LED Source is available with select combinations of the LEDs at these wavelengths.
- Typical power for LEDs with the Leica DMI collimation package (Item # Suffix: -C2).
- Minimum power for the collimated output of these LEDs. The collimation lens is installed with each LED.

Part Number	Description	Price	Availabilit
M265D2	Deep UV (265 nm) LED on Metal-Core PCB, 350 mA, 10 mW (Min)	\$1,110.00	Today
M280D2	Deep UV (280 nm) LED on Metal-Core PCB, 350 mA, 25 mW (Min)	\$1,110.00	Today
M310D2	Deep UV (310 nm) LED on Metal-Core PCB, 350 mA, 25 mW (Min)	\$1,110.00	Today
M340D3	Deep UV (340 nm) LED on Metal-Core PCB, 700 mA, 53 mW (Min)	\$183.33	Lead Time
M365D1	UV (365 nm) LED on Metal-Core PCB, 700 mA, 190 mW (Min)	\$149.00	Today
M365D2	UV (365 nm) LED on Metal-Core PCB, 1400 mA, 1150 mW (Min)	\$183.33	Today
M375D2	Customer Inspired!UV (375 nm) LED on Metal-Core PCB, 700 mA, 387 mW (Min)	\$126.00	Today
M385D1	UV (385 nm) LED on Metal-Core PCB, 700 mA, 270 mW (Min)	\$149.00	Today
M385D2	UV (385 nm) LED on Metal-Core PCB, 1400 mA, 1650 mW (Min)	\$183.33	Today
M395D3	UV (395 nm) LED on Metal-Core PCB, 500 mA, 400 mW (Min)	\$123.00	Today
M405D1	UV (405 nm) LED on Metal-Core PCB, 1000 mA, 410 mW (Min)	\$149.00	Today
M405D2	UV (405 nm) LED on Metal-Core PCB, 1400 mA, 1500 mW (Min)	\$183.33	Today
M420D2	Violet (420 nm) LED on Metal-Core PCB, 1000 mA, 750 mW (Min)	\$123.00	Today
M450D3	Royal Blue (450 nm) LED on Metal-Core PCB, 2000 mA, 1850 mW (Min)	\$63.00	Today
M455D2	Royal Blue (455 nm) LED on Metal-Core PCB, 1000 mA, 900 mW (Min)	\$67.00	Today
M470D2	Blue (470 nm) LED on Metal-Core PCB, 1000 mA, 650 mW (Min)	\$67.00	Today
M490D2	Blue (490 nm) LED on Metal-Core PCB, 350 mA, 200 mW (Min)	\$67.00	Today
M505D2	Cyan (505 nm) LED on Metal-Core PCB, 1000 mA, 400 mW (Min)	\$67.00	Today
M530D2	Green (530 nm) LED on Metal-Core PCB, 1000 mA, 350 mW (Min)	\$67.00	Today
M565D2	Lime (565 nm) LED on Metal-Core PCB, 1000 mA, 880 mW (Min)	\$56.70	Today
M590D2	Amber (590 nm) LED on Metal-Core PCB, 1000 mA, 160 mW (Min)	\$51.50	Today
M595D2	Amber (595 nm) LED on Metal-Core PCB, 700 mA, 445 mW (Min)	\$56.70	Today
M617D2	Orange (617 nm) LED on Metal-Core PCB, 1000 mA, 600 mW (Min)	\$51.50	Today
M625D2	Red (625 nm) LED on Metal-Core PCB, 1000 mA, 700 mW (Min)	\$51.50	Today
M660D2	Deep Red (660 nm) LED on Metal-Core PCB, 1200 mA, 940 mW (Min)	\$63.00	Today
M730D2	Far Red (730 nm) LED on Metal-Core PCB, 1000 mA, 515 mW (Min)	\$51.72	Today
M780D2	IR (780 nm) LED on Metal-Core PCB, 800 mA, 200 mW (Min)	\$56.70	Today
M780D3	NEW! IR (780 nm) LED on Metal-Core PCB, 800 mA, 800 mW (Min)	\$101.11	Today
M810D2	IR (810 nm) LED on Metal-Core PCB, 500 mA, 325 mW (Min)	\$61.11	Today
M850D2	IR (850 nm) LED on Metal-Core PCB, 1000 mA, 900 mW (Min)	\$56.70	Today
M850D3	NEW! IR (850 nm) LED on Metal-Core PCB, 1500 mA, 1400 mW (Min)	\$110.56	Today
M880D2	IR (880 nm) LED on Metal-Core PCB, 1000 mA, 300 mW (Min)	\$56.70	Today
M940D2	IR (940 nm) LED on Metal-Core PCB, 1000 mA, 800 mW (Min)	\$56.70	Today
M970D2	IR (970 nm) LED on Metal-Core PCB, 600 mA, 35 mW (Min)	\$56.70	Today
M1050D1	IR (1050 nm) LED on Metal-Core PCB, 700 mA, 50 mW (Min)	\$67.00	Today
M1200D2	Customer Inspired!IR (1200 nm) LED on Metal-Core PCB, 700 mA, 30 mW (Min)	\$123.00	Today

M1300D2	Customer Inspired!IR (1300 nm) LED on Metal-Core PCB, 500 mA, 25 mW (Min)	\$123.00	Today
M1450D2	IR (1450 nm) LED on Metal-Core PCB, 700 mA, 31 mW (Min)	\$123.00	Today
M1550D2	Customer Inspired!IR (1550 nm) LED on Metal-Core PCB, 700 mA, 31 mW (Min)	\$123.00	Today
MBB1D1	Broadband (470 - 850 nm) LED on Metal-Core PCB, 500 mA, 70 mW (Min)	\$366.00	Today
MWWHD1	Warm White LED on Metal-Core PCB, 1000 mA, 500 mW (Min)	\$51.50	Today
MWWHD3	Warm White LED on Metal-Core PCB, 700 mA, 2000 mW (Min)	\$75.00	Today
MCWHD2	Cold White LED on Metal-Core PCB, 1000 mA, 800 mW (Min)	\$51.50	Today
MCWHD3	Cold White LED on Metal-Core PCB, 700 mA, 2350 mW (Min)	\$75.00	Today

### Hide LED Connection Cable

### **LED Connection Cable**

- ▶ 4-Pin M8 Connector on One Side
- ▶ 4 Bare Wires on Other Side
- 2 m Long, 24 AWG Wires

The 4-Pin M8 connection cable can be used to connect the LEDs on metal-core PCBs to the following Thorlabs LED drivers: LEDD1B,

DC2100, DC4100, and DC4104 (the latter two require the DC4100-HUB).

	Pin	Description	Wire Color
	1	LED Anode	Brown
(T 4/)	2	LED Cathode	White
	3	EEPROM GND	Black
Male M8x1 Connector	4	FEPROM IO	Blue

Blue

The diagram above shows the male connector for use with the above Thorlabs LED drivers. The connector is a standard M8x1 sensor circular connector. Pins 1 and 2 are the connection to the LED. Please note that the bare PCB board LEDs shown on this page do not include an EEPROM like our mounted LEDs; hence pins 3 and 4 should not be connected. Also, note that the pin connection diagram shown here may not be valid for third-party LED drivers.

For customers using their own power supplies, we also offer a female 4-pin M8 connector cable (Item # CON8ML-4).

Г	Part Number	Description	Price	Availability
С	AB-LEDD1	LED Connection Cable, 2 m, M8 Connector, 4 Wires	\$15.50	Today
